Re: Site Inspection, Custer Claim - SM/047/033 and Horseshoe Bend Placer - SM/047/034

I briefly inspected the above referenced sites on May 2, 1988. Ridge Rock Mining has regraded the three acres on the west end of the Custer site. The total working area at this active operation is now approximately 4 acres.

Dennis Setliff is currently setting up a processing area immediately southwest of Ridge Rock. It appears that operations will soon be restarted at this site (SM/047/034). Small Mine NOI's have not yet been submitted for either site.
